Linux Day 2 — Commands Practice

Command • One-line explanation • Screenshot space

Name: _____ **Date:** _____

Instructions: Run each command in your Ubuntu/WSL terminal. Take a screenshot that shows the command and its output, then paste it into the space provided for that command.

Commands from the uploaded Day 2 terminal screenshot

1. Create the practice directory

Command:

```
mkdir -p ~/linux-day2
```

Explanation: Creates the linux-day2 directory in your home folder; -p avoids an error if it already exists.

Paste terminal screenshot here:

2. Move into the practice directory

Command:

```
cd ~/linux-day2
```

Explanation: Changes the current working directory to linux-day2.

Paste terminal screenshot here:

Linux Day 2 — Commands Practice (continued)

3. Create a notes file

Command:

```
touch notes.txt
```

Explanation: Creates an empty notes.txt file if it does not exist.

Paste terminal screenshot here:

---

4. List files with details

Command:

```
ls -l
```

Explanation: Shows files with permissions, owner, group, size, and modification time.

Paste terminal screenshot here:

Linux Day 2 — Commands Practice (continued)

5. Write text into the notes file

Command:

```
echo "Linux practice Day 2" > notes.txt
```

Explanation: Writes the text into notes.txt; > replaces any existing content in that file.

Paste terminal screenshot here:

---

6. Display the file contents

Command:

```
cat notes.txt
```

Explanation: Prints the contents of notes.txt in the terminal.

Paste terminal screenshot here:

Linux Day 2 — Commands Practice (continued)

7. Copy the file

Command:

```
cp notes.txt backup.txt
```

Explanation: Creates backup.txt as a copy of notes.txt.

Paste terminal screenshot here:

---

8. Check the copied file

Command:

```
ls -l
```

Explanation: Lists the files so you can verify that notes.txt and backup.txt exist.

Paste terminal screenshot here:

Linux Day 2 — Commands Practice (continued)

9. Rename the backup file

Command:

```
mv backup.txt old-notes.txt
```

Explanation: Renames backup.txt to old-notes.txt.

Paste terminal screenshot here:

---

10. Verify the rename

Command:

```
ls -l
```

Explanation: Lists the files so you can verify the new filename.

Paste terminal screenshot here:

Linux Day 2 — Commands Practice (continued)

11. Display the first five lines

Command:

```
head -n 5 notes.txt
```

Explanation: Shows the first five lines of notes.txt; if the file has fewer lines, it shows all available lines.

Paste terminal screenshot here:

---

12. Display the last five lines

Command:

```
tail -n 5 notes.txt
```

Explanation: Shows the last five lines of notes.txt; if the file has fewer lines, it shows all available lines.

Paste terminal screenshot here:

Linux Day 2 — Commands Practice (continued)

13. Count lines, words, and bytes

Command:

```
wc notes.txt
```

Explanation: Shows line, word, and byte counts for notes.txt.

Paste terminal screenshot here:

---

14. Search for the word Linux

Command:

```
grep "Linux" notes.txt
```

Explanation: Prints lines in notes.txt that contain the matching text Linux.

Paste terminal screenshot here:

Linux Day 2 — Commands Practice (continued)

15. Find files under the practice directory

Command:

```
find ~/linux-day2 -type f
```

Explanation: Lists regular files located under ~/linux-day2, including files in any subdirectories.

Paste terminal screenshot here:

Quick safety note

The commands in this worksheet create and manage files inside ~/linux-day2. Before running commands that overwrite or remove files, confirm your current directory with `pwd` and check filenames with `ls -l`.
